CHANGES IN THIS ISSUE

ACT data

Commencing with this issue labour force estimates for the ACT are included in this publication.

Revision of series

Estimates of the labour force contained in this issue reflect the results of two regular, but separate revision processes—

1. Estimates have been revised to take into account amended population estimates based on the results of the 1991 Census of Population and Housing. The revision affects original, seasonally adjusted and trend estimates. This is a regular five yearly adjustment and affects estimates from January 1989.
2. Seasonally adjusted and trend estimates have also been revised as a result of annual re-analysis of seasonal factors.

SUMMARY OF FINDINGS

New South Wales

Seasonally adjusted

In February 1994 there were 2,620,800 **employed** people in NSW. This was an increase of 4,000 over the number employed in January, and an increase of 81,800 people in the 12 months since February 1993.

The overall **unemployment rate** was 10.0% (10.6% for males and 9.3% for females). The corresponding rates for January 1994 were 10.4%, 11.1% and 9.3% respectively. The NSW unemployment rates for both males and females were less than the Australian rate. For males the rate was 10.6% compared with 10.9% and for females 9.3% compared with 9.9%.

The number of **unemployed** people was 292,600 in February 1994. This was 9,700 lower than in January 1994 and 29,100 lower than in February 1993. Males represented 61% of the unemployed compared with 62.8% in February 1993.

The **participation rate** stood at 61.7% overall, with a rate of 72.4% for males and 51.3% for females.

In February 1994 there were 2,913,400 people in the **labour force**, a decrease of 5,800 since January 1994, but an increase of 52,700 since February 1993.

UNEMPLOYMENT RATE, FEBRUARY 1994
(Seasonally adjusted)

Trend series

The number of **employed** people in NSW was 2,621,700 in February 1994. The trend estimate of employed people has increased each month since March 1993.

The overall trend **unemployment rate** was 10.2% in February 1994, as compared to 10.6% in November 1993. A downward movement has occurred since October 1993 following a period of five months when the rate remained steady.

The trend estimate of **unemployed** people in February 1994 was 298,800. There has been a decrease in each of the last five months and a total decrease of 15,300 in the number of people unemployed since February 1993.

The trend series **participation rate** was 61.8% in February 1994, and has been at this level since December 1993.

In February 1994 the trend estimate of the **labour force** stood at 2,920,600. This is an increase of 1,700 since January and continues an expansion which has been evident since May 1993.

Regions of NSW

Note: Estimates for regions of the State are subject to high sampling variability. Caution should be used when analysing these estimates and their movements. See Technical Notes, page 45.

Sydney

Between November 1993 and February 1994 the number of **employed** people in Sydney Major Statistical Region (MSR) increased by 1.1% to reach 1,730,500.

In February 1994 the **unemployment rate** was 9.9%. This was higher than the rate in November 1993 of 9.4%, but lower than February 1993 when the rate was 11.4%. The rate for people aged 15–24 years was 16.0% in February 1994.

In February 1994 unemployment rates within Sydney (MSR) varied between 20.5% in Fairfield–Liverpool Statistical Region (SR) and 4.7% in Lower Northern Sydney (SR). The highest unemployment rate among people aged 15–24 years was 29.1% in Fairfield–Liverpool (SR).

Gosford–Wyong (SR) recorded the lowest participation rate at 56.9% while the highest was 69.5% in Northern Beaches (SR).

Balance of NSW

In February 1994 the number of **employed** people in this area of NSW was 870,100, a decrease of 26,500 (3.0%) in the three months since November 1993.

The **unemployment rate** was 13.5%, a decrease of 0.9 percentage points since February 1993.

Overall the unemployment rate varied from 10.0% in Murray–Murrumbidgee (SR) to 17.9% for Richmond–Tweed and Mid-North Coast (SRs). This region also recorded the highest unemployment rate among people aged 15–24 years at 33.7%.

The Balance of NSW (MSR) continues to have a lower participation rate (57.6%) than Sydney (MSR) (64.5%). In February 1994 the rates within the Balance of NSW (MSR) varied between 54.2% for Richmond–Tweed and Mid-North Coast (SRs) and 60.8% for Wollongong Statistical Region Sector.

UNEMPLOYMENT RATE BY AGE, REGIONS OF NSW, FEBRUARY 1994

Sydney (MSR)

Balance of NSW (MSR)

Duration of unemployment

In February 1994 the **long term unemployed** (52 weeks and over) represented 39.9% of the total unemployed. This compares with 35.6% in February 1993.

The average duration of unemployment increased from 53.3 weeks in February 1993 to 61.2 weeks in February 1993.

Average duration of unemployment increased with age reaching an average of 87.6 weeks for people aged 45 years and over.

AVERAGE DURATION OF UNEMPLOYMENT, NSW

Age

Between January and February 1994, an increase in the number of people **employed** was recorded within all age groups except 15-19 and 25-34 year olds. These groups recorded decreases of 1.5% and 0.8% respectively.

In the 12 months between February 1993 and February 1994 those aged 60-64 years were the only group which did not record an increase in the number of people employed. This group decreased by 4.4% while the largest increases in employment were in the 55-59 years and 65 years and over age groups at 15.6% and 38.6% respectively.

The highest rate of **unemployment** in February 1994 was in the 15-19 years age group (25.5%). This is an increase since November 1993 when the rate was 19.3%, but a decrease in the 12 months since February 1993 when the rate was 27.5%.

Industry and occupation

In the 12 months to February 1994 movements in the level of employment within industry divisions has varied between a decrease of 7.9% in *Agriculture, forestry, fishing and hunting* to an increase of 40.4% in *Communication*.

In actual numbers, the largest increase was 27,200 people in *Finance, property and business services* and the largest decrease was 10,200 in *Transport and storage*.

Nine of the twelve industry divisions recorded increases in the number of people employed in the 12 months to February 1994. In the previous 12 months (February 1992 to February 1993) only four divisions recorded an increase.

Wholesale and retail trade continue to employ the largest number of people in both Sydney (MSR) and Balance of NSW (MSR) (21.1% and 19.6% respectively).

Total employment decreased in Balance of NSW (MSR) although increases were recorded in the majority of industries. However, these were outweighed by decreases in *Public administration and defence* and *Community services*. The largest increases were in *Communication* (35.0%) and *Mining* (16.0%).

Between February 1993 and February 1994 most occupation groups recorded a rise in the number of people employed. The exception was *Salespersons and personal service workers* with a decrease of 2.5%.

In the 12 months to February 1993 the occupation group to record the largest movement was *Plant and machine operators and drivers* with an increase of 14.0%.

In Sydney (MSR) *Tradespersons* were the only occupation group to decrease in numbers, down by 0.8%. In the Balance of NSW (MSR) decreases were recorded by *Managers and administrators* (7.4%) and *Professionals* (7.8%).

SUMMARY OF FINDINGS

Australian Capital Territory

Note: Seasonally adjusted estimates are not available for the ACT.

Trend series

The trend estimate of the number of **employed** people in the ACT in February 1994 was 153,700. This was slightly higher than in January and continued the upward trend which commenced in May 1993. In the 12 months since February 1993 the number of employed people increased by 2,700 (1.7%). Among employed people, the ACT had a lower proportion of males and a higher proportion of females than any state or the Northern Territory in February 1994.

EMPLOYED PERSONS, ACT
(Trend)

The trend **unemployment rate** rose slightly to stand at 7.7% in February 1994 following a period of five months during which the rate was unchanged. The rate for males was 7.8% and for females 7.6%. In February 1993 the overall rate was 6.9%. However, at 6.8% the rate for males was less than the rate for females (7.1%). The ACT continues to record the lowest unemployment rate in Australia except for the Northern Territory.

In February 1994 the trend estimate of the number of **unemployed** people in the ACT was 12,800 and was an increase of 13.3% since February 1993. As a proportion of the total unemployed in the ACT, males have increased from 52.2% in February 1993 to 54.7% in February 1994.

UNEMPLOYMENT RATE
(Trend)

The **participation rate** was 73.3%, a small decrease on the January figure of 73.4%. The participation rate for males was 80.8% and for females 66.2%. These rates were all slightly higher than the corresponding rates for February 1993 of 73.1% overall, 80.7% for males and 65.8% for females. ACT participation rates were higher than those for any of the states or the Northern Territory.

The ACT **labour force** was estimated at 166,500. Of the total civilian population aged 15 years and over, 68.1% were employed.

Age

In February 1994, the unemployment rate in the ACT decreased with age, with the highest rate (27.4%) among those aged 15–19 years. The rate was 15.3% for those aged 20–24 years and 6.0% for those aged 25 years and over.

Part-time work predominates in the 15–19 years age group with 69.7% of those employed working part-time and 53.3% of the unemployed looking for part-time work. The average hours worked per week by those aged 15–19 years was 18.6.

On average those aged 20–24 years worked 31.6 hours per week and those 25 and over worked 35.9 hours per week.

Participation rates varied between 66.3% for those aged 15–19 years to 86.9% for those aged 20–24 years.

UNEMPLOYMENT RATE BY AGE, ACT

Duration of unemployment

Average duration of unemployment in the ACT was 40.8 weeks in February 1994.

The long term unemployed (52 weeks and over) represented 25.5% of total unemployment. This was an increase from February 1993, when the proportion was 23.3%.

Among males the long-term unemployed were 23.3% of the total, while for females 27.6% were classified as long-term unemployed.

AVERAGE DURATION OF UNEMPLOYMENT, ACT

Country of birth

In February 1994 nearly three-quarters of the labour force (73.9%) in the ACT were born in Australia with a further 11.3% born outside Australia in the *main English speaking countries*. However, people born outside Australia in *other than main English speaking countries* recorded the highest levels of unemployment and made up 31.8% of unemployed people in the ACT.

Industry and occupation

In February 1994 three industry divisions accounted for 65.1% of employment. They were *Public administration and defence* as the largest industry with 26.0% of total employment, followed by *Community services* with 22.4% and *Wholesale and retail trade* with 16.7%.

Of all employed males, 27.1% worked in *Public administration and defence* while 29.7% of females were employed in *Community Services*.

In the 12 months since February 1993 the largest movement has been an increase of 4,100 (19.1%) in *Wholesale and retail trade*.

The largest occupation group was *Clerks* with 24.0% of employed people and 35.6% of employed females. *Professionals* were the second largest group with 19.3% of employed people including 20.5% of males.

In the 12 months between February 1993 and February 1994 the largest movement occurred among *Managers and administrators* with an increase of 2,400 (14.0%).

NOTE

This publication contains estimates of the civilian labour force in NSW and the ACT derived from the Labour Force Survey component of the Monthly Population Survey, which is conducted on a sample basis throughout Australia.

Explanatory notes for the data contained within this publication can be found on page 42.

Care should be taken in the interpretation of month-to-month movements in estimates. During the period September to December 1992 a new sample for the Labour Force Survey was introduced, which has increased the variability of estimates of month-to-month movements. See paragraphs 4–6 of the Explanatory Notes or *Information Paper: Labour Force Survey Sample Design* (6269.0), available from any ABS office.

LONG TERM UNEMPLOYED AS A PROPORTION OF TOTAL UNEMPLOYED, ACT

LABOUR FORCE SUPPLEMENTARY TOPICS

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time. The results of these surveys on labour force and related topics are published separately as shown below.

<i>Catalogue no.</i>	<i>Title of Publication</i>	<i>Price (a) \$</i>

EXPLANATORY NOTES

Introduction

This publication contains estimates of the civilian labour force derived from the labour force survey component of the monthly population survey, which is conducted on a sample basis throughout Australia.

The population survey

2. This survey consists of the labour force survey (LFS) and, in most months, one or more supplementary topics. The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers slightly less than one-half of one per cent of the population. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

Scope

3. The labour force survey includes all persons aged 15 years and over, except:

- (a) members of the permanent defence forces;
- (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- (c) overseas residents in Australia; and
- (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

Survey sample redesign

4. Following each Population Census, the ABS redesigns and reselects the LFS to take into account the new information which is obtained from the Census. The sample used in the LFS from September 1987 to August 1992, which was designed and selected using data from the 1986 Census, has been updated and reselected using information collected in the 1991 Census. The new sample was phased in over the period September 1992 to December 1992.

5. For the most part, one-quarter of the new sample was introduced each month so that, by December 1992, the entire new sample was in place.

Potential effects on labour force survey estimates

6. Implications for estimates produced from the LFS due to sample redesign and its implementation are as follows.

- (a) The sampling error overall increased initially by about seven per cent over the previous level but will decline gradually during the life of the new sample. For State estimates, the initial increase was about 8 per cent, while for the Territories,

there was a decrease of 19 per cent. There were also higher standard errors for movements produced over the period September 1992 to December 1992 compared with those for the corresponding series produced prior to this period and from January 1993 onwards. Overall, these were estimated to be up to 20 per cent higher than the normal standard errors on monthly movements.

- (b) Analysis has shown that the unemployment rate is marginally higher (less than 0.5 percentage points on average) for those persons in sample for the first time. Normally, this will not affect the overall estimates of month-to-month movements because the number of persons in the sample does not change significantly. However, during the transition period, there were twice as many people as usual in the sample for the first time. This may have caused a small upward movement (of less than 0.1 percentage points on average) in the unemployment rate from August 1992 to September 1992 and a compensating decrease from December 1992 to January 1993.

7. For further information, see *Information Paper: Labour Force Survey Sample Design* (6269.0).

Definitions

8. The labour force category to which a person is assigned depends on the actual activity undertaken during the reference week (i.e. whether working, looking for work, etc.). The following definitions, which conform closely to the international standard definitions specified by the International Labour Office (ILO), relate only to those persons within the scope of the survey.

9. *Employed persons* comprise all civilians aged 15 years and over who, during the reference week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and self-employed persons) in a job or business, or on a farm; or
- (b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or

- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.
10. Prior to April 1986, unpaid family helpers who worked for 1 to 14 hours were excluded from the category of employed persons.
11. Employed persons can be classified into:
- full-time workers* (i.e. those who usually worked 35 hours or more a week (in all jobs) and others who, although usually part-time workers, worked 35 hours or more during the reference week); and
 - part-time workers* (i.e. those who usually worked less than 35 hours a week and who did so during the reference week).
12. *Unemployed persons* are all those aged 15 years and over who were not employed during the reference week, and:
- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:
 - were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
 - were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
 - were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.
13. *Actively looking for work* includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service notice-boards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.
14. *The unemployment rate* for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.
15. *The labour force* comprises all persons who, during the reference week, were employed or unemployed as defined above.
16. *Long term unemployed* comprises persons unemployed for a period of 52 weeks or more.
17. *Persons not in the labour force* are those who, during the reference week, were not in the categories *employed* or *unemployed* as defined above.
18. *The labour force participation rate* for any group is the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.
19. *Duration of unemployment* is the period from the time the person began looking for work or was stood down to the end of the reference week.
20. *Unemployed persons classified by industry and occupation.* Unemployed persons who had worked full-time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
21. *Industry classification.* The classification of industry is in accordance with the Australian Standard Industrial Classification (ASIC) described in *Australian Standard Industrial Classification, Vol. 1 — The Classification* (1201.0)
22. *Occupation classification.* Occupation data are presented in accordance with the *Australian Standard Classification of Occupations (ASCO)* (1221.0 and 1222.0).
23. *Marital status.* In the labour force survey, persons are classified as *married* or *not married*. Persons are classified as *married* if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey
24. *Persons attending school or a tertiary educational institution.* Persons attending school comprise those aged 15–19 years who, during the reference week, were enrolled full-time at secondary or high schools (including boarding school pupils). Persons attending a tertiary educational institution comprise those aged 15–24 years who were enrolled full-time at universities, colleges of advanced education, technical colleges, colleges of technical and further education, and theological colleges.
25. *Employment/population ratio.* For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 years and over in the same group.

Statistical areas

26. The regional structure for NSW used in tables 16 to 21 is based on the Statistical Region structure of the Australian Standard Geographical Classification (ASGC). For further information concerning statistical areas, please refer to pages 41–43 and the publications *Regional Statistics, New South Wales* (1304.1) and *Australian Standard Geographical Classification* (1216.0).

Seasonal adjustment and trend estimation

27. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does

not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

- (a) Employment: 5 in 10 monthly movements
- (b) Unemployment: 7 in 10 monthly movements
- (c) Unemployment rate: 7 in 10 monthly movements
- (d) Participation rate: 9 in 10 monthly movements

28. Smoothing seasonally adjusted series produces a measure of the underlying trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available.

29. Seasonally adjusted series for NSW appear in this publication in Table 2. Trend estimates for NSW and ACT appear in Tables 2 and 22 respectively. Seasonally adjusted data is not available for ACT.

Reliability of the estimates

30. Estimates in this publication are subject to sampling and non-sampling errors. The Technical Note on pages 45-49 of this publication gives information on these sources of error.

TECHNICAL NOTE ON DATA RELIABILITY

Sources of error

There are a number of possible sources of error in sample surveys and these can be classified into two types: *sampling error*; and *non-sampling error*.

Non-sampling errors

2. Non-sampling errors may arise as a result of errors in the reporting, recording or processing of the data and can occur even if there is a complete enumeration of the population. Non-sampling errors can be introduced through: inadequacies in the questionnaire; non-response; inaccurate reporting by respondents; errors in the application of survey procedures; incorrect recording of answers; and errors in data entry and processing.

3. It is difficult to measure the size of the non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey, and from question to question. However, every effort is made in the design of the survey and development of survey procedures to minimise the effect of these errors.

Sampling errors

4. Sampling error is the error which occurs by chance because the data were only obtained from a sample, not the entire population.

Standard error of estimates

5. One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the *standard error* (SE). There are about two chances in three that a survey estimate is within one standard error of the figure that would have been obtained if all persons had been included and about 19 chances in 20 that it is within two standard errors. That is, there are 19 chances in 20 that the true estimate is in the range—

$$X - 2 \times SE(X) \text{ to } X + 2 \times SE(X)$$

(Where X is the estimate)

The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example below Table A).

6. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.

Relative standard errors

7. The standard error can also be expressed as a percentage of the estimate and this is known as the *relative standard error* (RSE). The RSE is determined by dividing the standard error of an estimate $SE(X)$ by the estimate X and expressing it as a percentage. That is,

$$RSE(X) = \frac{SE(X) \times 100}{X}$$

(where X is the estimate)

8. The look up list on the following page provides a guide for the calculation of standard errors and relative standard errors for a range of statistics.

METHODS FOR CALCULATING THE STANDARD ERRORS FOR SELECTED ESTIMATES

<i>Measure of reliability to be determined</i>	<i>Method</i>
Standard errors of estimates of employed persons.	Determine the SE from Table A directly.
Standard errors of estimates of unemployed persons.	Multiply the SE from Table A by 1.06.
Standard errors of estimates of persons not in the labour force.	Multiply the SE from Table A by 1.1.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the RSE of the numerator (X) and the denominator (Y) then apply the following formula. $RSE\left(\frac{X}{Y}\right) = \sqrt{[RSE(X)]^2 - [RSE(Y)]^2}$
Standard error of average duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 1.3.
Standard error of median duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 2.0.
Standard error of monthly movements.	Using Table B, look up the SE of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.11.
Standard error of annual movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

Linear interpolation

Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In February 1994, there were 568,800 (X_e) employed persons working part-time in New South Wales. This estimate falls between the values 500,000 (X_l) and 1,000,000 (X_u) in Table A.

2. The standard error of the estimate is determined as follows.

$$\begin{aligned}
 \text{Firstly, calculate } F &= \frac{X_e - X_l}{X_u - X_l} \\
 &= \frac{568,800 - 500,000}{1,000,000 - 500,000} \\
 &= 0.14
 \end{aligned}$$

3. Secondly, calculate the standard error of the estimate, $SE(X_e)$ thus,

$$\begin{aligned}
 SE(X_e) &= SE(X_l) + (F \times [SE(X_u) - SE(X_l)]) \\
 &= 8,800 + (0.14 \times [11,300 - 8,800]) \\
 &= 9,150
 \end{aligned}$$

4. Therefore the standard error of the number of employed persons in February 1994 working part-time in New South Wales (568,800) is 9,150.

For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

National Dial-a-Statistic Line

0055 86 400

This number gives you 24 hour access, 365 days a year for a range of statistics.

Electronic Data Services

A wide range of ABS data are available on electronic media. Selections of most frequently requested statistics are available, updated daily, on DISCOVERY (Key *656#). The ABS PC TELESTATS service delivers major economic indicator main features ready to download into personal computers on the day of release. The PC AUSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on electronic data services available, contact Information Services in any of the ABS Offices (see Information Inquiries below for contact details).

Bookshops and Subscriptions

There are over 500 titles of various publications available from ABS bookshops in all ABS Offices (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are provided by mail on a regular basis at no additional cost (telephone Publications Subscription Service toll free on 008 02 0608 Australia wide).
